Professional Summary

Analytical AIML undergraduate with hands-on experience in Python programming, Generative AI, and Large Language Model (LLM) integration. Skilled in building Retrieval-Augmented Generation (RAG) pipelines, AI chatbots, and prompt engineering strategies using LangChain, Hugging Face, and OpenAI APIs. Proficient in designing and integrating REST APIs and microservices, working with SQL/NoSQL databases and vector databases (FAISS, ChromaDB, Pinecone), and deploying AI/ML solutions on cloud platforms (AWS, Azure). Strong foundation in software engineering, Git version control, debugging, and cross-functional collaboration to deliver reliable, production-ready AI systems.

Education

Saveetha Engineering College

2023–2027

Bachelor of Engineering (B.Tech) — Artificial Intelligence and Machine Learning

CGPA: 8.19/10

Technical Skills

Programming	Python, Java, SQL, JavaScript, C
Generative AI / LLM	Generative AI, LLMs, Prompt Engineering, RAG (Retrieval-Augmented Generation), LangChain, Hugging Face, OpenAI API, Transformers, AI Agents, AI Chatbot Development
AI/ML & Data	Machine Learning, Deep Learning, NLP, Computer Vision, Feature Engineering, Scikit-learn, TensorFlow, PyTorch, Pandas, NumPy, MLOps, Model Deployment
Vector Databases	FAISS, ChromaDB, Pinecone, Semantic Search, Vector Embeddings
APIs & Backend	REST APIs, Microservices, JSON, FastAPI, Backend Services Design & Integration
Databases	MySQL, Firebase, SQL, NoSQL
Frameworks	FastAPI, React.js, REST APIs
Cloud & DevOps	AWS, Azure, GCP (familiarity), Docker, CI/CD, Git, GitHub, Version Control
Core Concepts	OOP, Data Structures, Algorithms, Problem Solving, Analytical Thinking
Tools	Git, GitHub, VS Code, Postman, Android Studio, Microsoft Excel
Platforms	Linux, Windows
Key Competencies	Strong Communication & Collaboration, Quick Learner, Fast-Paced Environment Delivery, Cross-Functional Teamwork

Professional Experience

Shiash Info Solutions — Machine Learning Intern

May 2025 – Jul 2025

- Built and maintained Python-based ML pipelines for a Brain Stroke Prediction system, applying feature engineering and explainable AI techniques.
- Designed backend preprocessing workflows and collaborated with cross-functional teams to translate business requirements into model integration tasks.
- Debugged, optimized, and validated model performance to ensure reliable, production-quality outputs.

Hejex Technologies — Python Development Intern

Sep 2024 – Oct 2024

- Developed automated data validation and reporting systems using Python, Pandas, and backend workflow automation.
- Built and integrated REST API endpoints for internal reporting tools, improving data accuracy and processing efficiency.

Certifications

- AWS Certified Cloud Practitioner
- Microsoft Azure AI Innovation Challenge 2025
- Power BI Forage

Projects

Enterprise RAG AI Assistant

Python, FastAPI, React.js, LangChain, ChromaDB, OpenAI API, AWS

- Developed an enterprise-grade Retrieval-Augmented Generation (RAG) platform using LangChain and ChromaDB (vector database) for semantic search across **1000+ PDF documents**.
- Built document ingestion, vector embeddings, context-aware retrieval, and prompt engineering strategies to optimize LLM output quality.
- Designed low-latency REST APIs with FastAPI for AI-powered knowledge discovery, integrated with enterprise applications and databases.

MailCrafter AI - GitHub

Python, FastAPI, React.js, OpenAI API, Prompt Engineering

- Developed an AI-powered email generation platform using LLM APIs (OpenAI), FastAPI, and React.js for automated professional email drafting.

- Engineered prompt strategies, customizable templates, and real-time content generation, applying Generative AI best practices to improve output relevance.

CloudDeploy-Pro - GitHub

AWS, React.js, Lambda, DynamoDB, API Gateway

- Developed a serverless deployment management platform enabling developers to submit, track, and monitor cloud deployment requests via a centralized dashboard.
- Integrated AWS Lambda, API Gateway, DynamoDB, Cognito, and React.js to automate deployment workflows, authentication, and infrastructure monitoring using microservices architecture.

Ethereum Fraud Detection System - GitHub

Python, Machine Learning, Scikit-learn,

SQL

- Developed an ML-powered fraud detection engine analyzing **50K+ Ethereum transactions** using Python and Scikit-learn.
- Improved fraud prediction precision through feature engineering, ensemble learning, and SQL-based data pipelines.

Achievements

- **IBM Z Datathon 2024 Winner** — Won \$500 global competition
- **Top 5 Finalist** — National Student Space Challenge, IIT Kharagpur
- **National Boxing Champion 2024** — Gold Medal Winner
